

Corporate Social Responsibility Mission Statement

ABMEC is committed to promoting responsible, ethical, and sustainable practices across the global mining and engineering sector. As a representative body, we provide guidance and advocacy to support our members in delivering projects that create long-term value for society, the environment, and the economy.

Corporate Social Responsibility Policy

ABMEC encourages high standards of environmental stewardship, including the responsible use of resources, reduced environmental impact, and the adoption of low-carbon technologies. We promote collaboration and knowledge sharing to support continuous improvement and sustainable practices across the sector.

We are equally committed to social responsibility, supporting workforce diversity, skills development, and meaningful stakeholder engagement. Through initiatives such as the Future Talent Initiative, we contribute to community development and help address the industry skills gap.

Health, safety, and wellbeing remain fundamental priorities. ABMEC promotes a strong culture of safety, professionalism, and continuous development, while representing members in key safety forums across the mining supply chain.

We also uphold strong governance and ethical conduct, encouraging transparency, accountability, and anti-corruption. These principles are reflected in ABMEC's own governance and reporting processes.

We are committed to reviewing this statement annually to ensure continued relevance and impact.
